

Up to 30% lower chemical consumption

Valmet Anti Rewet

The Valmet Anti Rewet, makes your washing more efficient and reduces the wash loss carryover.

Valmet Anti Rewet is an insert device for the filtrate channels designed to reduce the rewetting effect, which reduces chemical consumption by as much as 30%. Anti Rewet prevents the filtrate from flowing backwards once it has entered the channels. It enhances the function of the TwinRoll™ press, providing improved washing efficiency, higher outgoing pulp consistency, and potential for increased capacity.

Benefits

- Reduces rewetting effects
- Improves washing efficiency
- Potential for increased capacity
- Less wash loss carryover to the bleaching plant
