

Valmet Slitter Services

Slitter unit repair service for Beloit Lenox slitter holders

There's nothing worse than having a part go bad on your slitter assembly, taking it out of service. Why worry about tracking separate parts and pieces when you can easily replace the entire assembly?

Benefits

- Optimum slitting results
- Reduced dusting
- Reduced downtime
- Drop-in unit, ready to install
- **Full mechanical guarantee, OEM certified**

Simplify slitter performance

Contact Valmet for a Return Goods Authorization (RGA) number. Then simply send your slitter holder to Valmet and it will be swiftly repaired and returned to you as an OEM certified unit.

Repair and certification process

All rebuilt holders are completely assembled with their new replacement parts. Critical tolerances as well as specific operational aspects are thoroughly checked at a slitter station test stand. Each unit is then accepted for service as an exchange unit, receiving its OEM certification and full mechanical guarantee.

Critical tolerance and operational checks include:

- Blade sequence testing
- Sideload pressure testing
- Shear angle verification to acceptable tolerances
- Air leak check

All equipment is certified on the Valmet test stand.

Improve customer roll quality

For the best possible roll quality, all of the factors in the slitting process have to function properly. As a winder manufacturer, Valmet fully understands the entire slitting process.

Dusting and ragged roll edges are usually caused by poor condition of the slitting equipment. Predictive maintenance and continuous development through Valmet's Slitter Management service helps maintain and improve customer roll quality.

Use of Slitter Management considerably reduces maintenance costs of the winder, extending slitter blade life and blade change intervals, thus improving slitting performance. More effective winder operation improves productivity of the entire line.
