

Sector Recovery Services

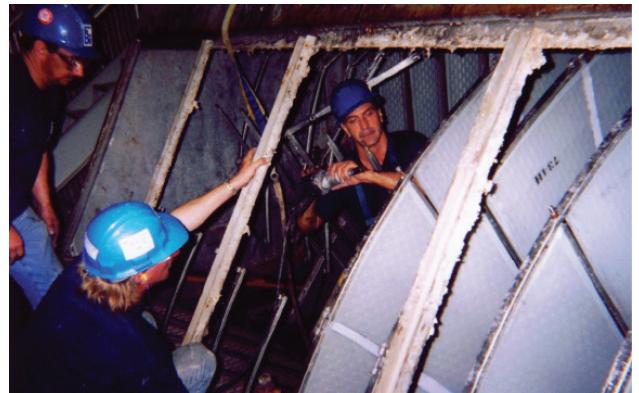

Disc Filter, Deckers, Save-alls, Thickeners & Washers

Includes, but is not limited to, removing sectors from the filter, stripping off the old cover, power washing, installing new covers, new gaskets and installing the freshly covered sectors back in the filter. We are also available to inspect, repair and align the knock-off, sluice and wash showers.

Benefit

Reduce manpower requirements and optimize filter performance with Valmet sector recovery services.

Off-Site Recovery Services

If you prefer to remove and install the sectors yourself, we can still perform the recovery operation of cleaning the sectors and recovering them at our facilities.

Let Us Show You the Difference!

Send us a sector in need of a new cover. We will strip, clean and recover the sector in an equivalent filter media at “no charge” to demonstrate our recovery and cover capabilities.

“Do It Yourself” Sector Recovery

Replacement covers are available in synthetics and stainless steel. We will build your covers with the components that will best meet the requirements of your process.
