

Valmet Nip Impression Kit

Valmet Nip Width Kit has been specifically designed to determine the actual working nip widths of a pair of the rolls under operating condition. This impression may be used to determine the need for corrective measures, such as re-crowning or refinishing or to determine more satisfactory roll pressure for given operation.

Benefits

- Determine actual nip width of roll pair
- Shows under or over crown of nip pair
- Provides information regarding too high or not enough loading pressure
- Helps to adjust roll cover grinding intervals and felt life
- Shows 100% of the full cd profile of the nip

These impressions should be retained and may be referred to periodically and compare with successive impressions to check rate of wear, roll performance, etc. Nip width impressions are taken when rolls are not rotating and only when the machine is down and the felts (if used) are removed or pushed to one side.

Storage and Handling:

- Do not store near heat
- Handle lightly

VALMET NIP KIT TYPES	Application	Paper dimensions / roll
Un-waxed-Item MOD0006484	Dry nip applications, moderate heat	8" x 175' (203 x 53,340 mm)
Waxed-Item MOD0006483	Moist nip applications but no heat	8" x 175' (203 x 53,340 mm)

Each kit consists of two (2) rolls of paper, carbonized and plain paper, weighs about 4 lbs (1,8 kg). A minimum order of three (3) kits is required.
